Size Bus Seat

SafeGuard STAR[®] restraints are trusted by more districts to provide adaptable child safety for school bus transportation. The five-point restraint systems make the proper and safe transportation of preschool, Head Start, and special needs children quick and easy. STAR restraints are intuitive, comfortable, and easy to use.

The SafeGuard STAR is CAPE[®] tested and meets FMVSS 213 and 302.

Our standard STAR add-on restraint system easily adjusts to provide a proper, secure fit for children 25 to 65 lbs., up to 57 inches tall, and over one year of age.

Fit 3 STARs on a standard bus seat.

Here's what people are saying about the STAR

"That bus went for a ride, and the STAR did exactly what it was meant to do... It's a good product."

- Gary Elliott, Director of Transportation for Copperas Cove ISD, explains how the STAR kept the child on board restrained in his seat when a pick-up truck struck the school bus, forcing it into a ditch and on its side on April 23, 2009.

"I love this seat! It is the easiest seat to install on a bus. The harness hook up for the child is also easy for anyone to do. It's the best way to safely transport children. Seat belts are ok, but the 5-point harness system is better." *- Heather Quirk, Car Seat Technician, Quigley Bus Service*

"Our favorite piece of safety equipment is the STAR restraints. Easy to install, only takes up one seating space and the children love sitting in them." *- Cathy Entile, Special Service Supervisor, Oswego*

STAR Special Needs

STAR Special Needs offers the same protection as the standard STAR, with the extra support accessories to accommodate children with a wide range of special health care needs. The restraint easily adjusts to provide support for children 25 to 105 pounds with torso heights up to 20 inches tall (torso height = seating position base to shoulder).

- Extra support features include an abductor, recline wedge, torso supports, height adjusters and adjustable headrests.
- Wraps around most any size school bus seat.
- Meets or exceeds all applicable federal and Head Start safety standards.

Testing

SafeGuard tests all of its school bus seating at The Center for Advanced Product Evaluation (CAPE®) - the only crash test facility of its kind in the world.

CAPE is equipped to handle the school bus testing of all shapes and size with the largest barrier block in the world as well as a 90 degree rollover machine designed for large commercial vehicles.

CAPE tests the most common standards: FMVSS 210, 222, and 225.
